

EB - Rad. - Inner 04

Write the inner energy balance for object 2 being in thermal equilibrium. Use view factors and surface brightness whenever possible.

Energy balance:

$$\frac{\partial U}{\partial t} = \sum \dot{Q}_{\text{in}} - \sum \dot{Q}_{\text{out}}$$

$$0 = \alpha_2 \Phi_{12} \dot{Q}_1 - \dot{Q}_{2,\epsilon}$$

Heat fluxes:

The surface brightnesses of body 1 will be determined in a separate task and can be stated as \dot{Q}_1 .

The emitted radiation of body 2 by use of the emission coefficient and the Stefan-Boltzmann law:

$$\dot{Q}_{2,\epsilon} = \epsilon_2 A_2 \sigma T_2^4$$

Substituting and rewriting:

$$0 = \alpha_2 \Phi_{12} \dot{Q}_1 - \epsilon_2 A_2 \sigma T_2^4$$
