

Heat Transfer Correlation 11.5

A sphere falls through a non-moving fluid. Calculate the mean heat transfer coefficient $\bar{\alpha}$.

Reynolds number:

$$Re_d = \frac{u \cdot d}{\nu} = 54.95$$

Nusselt number:

$$\overline{Nu}_d = 2 + \left(0.4 \cdot Re_d^{\frac{1}{2}} + 0.06 \cdot Re_d^{\frac{2}{3}} \right) \cdot Pr^{0.4} \cdot \left(\frac{\eta_{\infty}}{\eta_w} \right)^{\frac{1}{4}} = 16.04$$

Heat transfer coefficient:

$$\bar{\alpha} = \frac{\overline{Nu}_d \cdot \lambda_f}{d} = 186.08 \text{ W/m}^2\text{K}$$
